

Directions for Graphs

You will create 2 graphs

1st graph: Before the bears have soaked

DV= Graph the density g/mm^3

IV= Either the bear color or time bear soaked

Bar #1 the first bear of that level of IV

Bar #2 is the second bar of that level of IV

Bar #3 is the third bear of that level of IV

Bar #4 is the average density of all 3 bears of that level of IV

Remember to calculate average - add the 3 numbers together & divide by 3.

2nd Graph: After the bears have soaked

DV= Graph the density g/mm^3

IV= Either the bear color or time bear soaked

Bar #1 the first bear of that level of IV

Bar #2 is the second bar of that level of IV

Bar #3 is the third bear of that level of IV

Bar #4 is the average density of all 3 bears of that level of IV

Remember to calculate average - add the 3 numbers together & divide by 3.
